5DX Structural Process Test Systems**Tamper Proof Hardware****Situation:**

Due to a vendor change for the tamper-proof hardware used the 5DX Series II main cabinet, you need a different size security hex tool.

Solution:

This tool will be included with system and upgrade shipments. As with the original tool (8710-2683), don't leave it with the customer! You can also order this tool from SMO with part number 8710-2693.

Because you could encounter either type of hardware in the field, we recommend that you include both types in your tool kit.
