Rev. 15

**Situation:**

Assume there is a power fail, i.e. power was disconnected or interrupted for less than 3 seconds from the 81150A and power comes back within these 3 seconds, then the 81150A will not boot correctly and the front panel display will remain black.

**Solution/Action:**

Disconnect the power cable from the 81150A for at least 30 seconds.

Then re-connect the power cable to the unit and press the power on button to boot the unit.

The 81150A should now boot without any problems.
