Rev. 15

Situation:

You switch on the instrument and the instrument seems to boot normally.

You will see the following progress on the display:

However, after sequence above the front panel display stay dark.

Try to reboot the instrument at least 2 times. Disconnect the power cord and wait for at least 30 seconds before re-connecting and restarting again.

Solution/Action:

The communication between the processor board and the main board is not working correctly or is broken completely.

.

1. Try to reboot the instrument at least 2 times. Disconnect the power cord and wait for at least 30 seconds before re-connecting and restarting again.
2. Take the Service Guide of the 81150A and open chapter "How to Remove and Replace the 81150A Main Board".
3. Replace the main board assembly. Do not separate processor board and main board.
