83212D Mobile Station Test Software**New software****Situation:**

The 83212D software provides flexible but fast and accurate automated testing of GSM/DCS/PCS mobiles.

When used in conjunction with the 8922P/R Test Sets, it can automatically test Dual-band (GSM/DCS) mobiles. In the Flowchart it is now possible to assign the mobile to any GSM900 or DCS1800 radio channel without dropping the call first and in the Full and Quick tests, a Dual-band handover is automatically included when testing Dual-band capable mobiles.

The software has improved ORFS (Output RF Spectrum) measurement capability and conforms to the latest GSM Phase II specifications for power accuracy and the power versus time mask.

Product is 83212D Mobile Station Test Software
 Options are 83212D #H01 83212C -> D upgrade (non CPL)
 83212D #H02 83212A/B -> D upgrade (non CPL)
 83212D #OB1 adds manual set

83212D is also available as 8922 #012.

83212D user guide is 83212-90019.

Software medium is 8922 OTP memory card.

DATE: January 1999
