Agilent Technologies

Situation:
A guard is available to protect the front-panel jumper cables from being damaged during shipment.

Solution/Action:
Two guards should be installed to cover the front-panel jumper cables before the PNA is returned to the customer. The guards are identical, so either one can be used to cover the left or right-side jumper cables. The guards simply require a push-on installation, so no tools are necessary. To install, push each guard over the jumper cables until its cushioning material touches the front panel of the PNA.
