ADDITIONAL INFORMATION:

Situation:

At power up of the system with the affected chassis using with ESM M9505-00133 or M9505-00233, the system would not fully boot. The status LED of the ESM keeps flashing green. The modules installed are not enumerating and showing Fail LED with solid red.

Solution/Action:

Upgrade the chassis and ESM firmware to version 2.1.5 or greater. Refer to [M9502A and M9505A AXle Chassis Firmware](#) for detail on how to upgrade. This FW 2.1.5 can only be used with ESM M9505-00133, M9505-00233, or greater. DO NOT upgrade to this FW version if you are using ESM M9505-00132, M9505-00232 or older.
